# HR Analytics – Business Insights

## 1. Overview

The analysis examines employee attrition across different workforce segments using 1,470 employee records. The overall attrition rate is 16.12%, with 237 employees having left the organization.

## 2. Key Findings and Business Implications

### Finding 1: Age Group

- Employees under 25 have the highest attrition rate at 39.18%.
- Business implication: HR could investigate early-career expectations, onboarding, career development, and employee engagement for younger employees.

### Finding 2: Overtime

- Employees working overtime have an attrition rate of 30.53%, compared with 10.44% for employees not working overtime.
- Business implication: HR could review workload distribution, overtime frequency, and work-life balance.

### Finding 3: Tenure

- Employees with less than two years of tenure have the highest attrition rate at 34.88%.
- Business implication: HR could examine onboarding, early employee support, role expectations, and career progression.

### Finding 4: Job Role

- Sales Representatives have the highest job-role attrition rate at 39.76%.
- Business implication: HR could investigate sales targets, compensation structure, workload, and role-related challenges.

### Finding 5: Monthly Income

- Employees earning below 3,000 monthly have the highest income-group attrition rate at 28.61%.
- Business implication: HR could review compensation competitiveness and differences in employee responsibilities.

## 3. Recommendations for HR

1. Review onboarding and employee support for new hires.
2. Monitor overtime patterns and workload distribution.
3. Investigate retention challenges in sales-related roles.
4. Review compensation across employee groups.
5. Conduct employee feedback surveys to understand the reasons behind attrition.

## 4. Final Conclusion

The analysis identifies workforce segments with relatively higher attrition rates. These patterns can help HR prioritize further investigation and develop targeted retention strategies.

The findings represent associations in the available dataset. They do not establish that any particular factor directly causes employees to leave.
